Subject: WSHOW Problem Persists

---

Folks,

Despite the fact that every Monday morning I write a note to ITTVIS support alerting them to the fact that WSHOW doesn't work in the IDL Workbench, the problem persists. Does anyone have any insight at all into why this is such an intractable problem to solve?

It makes working with the Workbench on a laptop or (Heaven forbid!) a single monitor excruciatingly painful. I'd be grateful for any good news you might have heard in this regard.

Cheers,

David
