
Subject: find positions in vectors

Dear experts,

another question:

I have two vectors (simplified):

a= [1,2,3,4,5,6,7,8]

b=[2,5,7]

now I want to find the positions in the vector a which contains no values of b. I know that it is working with the histogram-function. And I can do it for integers, but in reality my values are floats between 0.0 and 50.0. and that is the point where I got problems!

Best wishes,

thomas
