Subject: IDL is not accurate enough!

Hi,

I've been having problems with IDL accuracy. I'm trying to perform calculations using the gamma function. The problem is that it grows VERY fast! Performing this calculation in double (namely gamma(x)/gamma(y) with x and y big) yields the result: NaN...

Would it be possible to use a program like 'Mathematica' (or any other) and to plug it in my ILD program? Some kind of CALL_EXTERNAL that is to say. If it is possible, how can I do it and what is the best program to use?

Thanks, Noah
