I currently use IDL 6.0 operating under Windows XP and i'm looking to
purchase a new computer, which means i'm likely to end up with a
machine having the Vista operating system. Could anyone please tell me
if I can install the IDL 6.0 designed for Windows XP on a Vista
machine and if so what the problems might be? I know i can uninstall
Vista and install XP on a new machine, or i could purchase IDL for
Vista, but i really just want to continue operating with the IDL
version which i'm happy with on an up to date and faster machine.

many thanks for any help,
2d
