Dear all,

I would like to make an image, presenting cluster classes on the x-axes, and different variables on the Y-axes. Each combination (X_i, Y_i) should be represented by a block, whereby its color fill should represent a standard deviation, and with the mean written in the box as text.

If have no idea how I could construct something like that? Could anybody help me out with this?

Thank you!

Best Regards,
Matthias
