Subject: Re: ENVI on Fedora Core 9 in VMware virtual machine
Posted by jdehls on Tue, 09 Sep 2008 15:26:06 GMT

I am running IDL 7/ENVI 4.5. Even the simple stuff crashes IDL. I installed libstdc++.so.5 (and various other libraries mentioned in tech tips) with no improvement.

I have solved the problem for now by creating a new VM with Fedora Core 6 running. Envi works just fine and I have no need for a newer version of Fedora. I simply started with FC9 since it was the latest. FC6 has always been stable for me.

Anyway, at least I now know it was not a problem with VMware. Thanks for your help all.
