Subject: HDF question - how to make a copy of the structure?
Posted by envi35@yahoo.ca on Tue, 30 Sep 2008 14:27:23 GMT

Hi, I've recently learned to read some MODIS product in EOS-HDF format in IDL. what I'm doing is to open several MODIS files and do some tests, then output the results. I'd like to output the results to a HDF file with the same structure or attributes as the MODIS files. Is there a function in IDL to let me make a copy of the structure of the HDF file? I've written the results to one of the input files so far, but I want to keep the original files, I have to make a copy of the file I'm rewritting, and sometimes I lost a file by mistake! then I thought I should creat another HDF file, copy the structure of the input files.....Can you give me some help on how to do this?

Thank you in advance,
Jenny
