I did it like this :

```
idl -arg D20051210_220601_P.QC.eol
```

And then

```
IDL> .r upperdata.pro  
% Compiled module: $MAIN$.  
D20051210_220601_P.QC.eol  
% OPENR: Error opening file. Unit: 100, File: filename  
  No such file or directory
```

It can print the right name but did not open the file.....
