
Subject: giving input to fortran program using spawn in IDL

Dear all,

I have some programs written in fortran-77. I want to run them in the IDL editor. I tried using spawn command. Which is good only if I am not worry about input to fortran from IDL itself. The result from spawn can be split according our fortran program.

But I am creating some data from IDL, which is required for fortran as input. I search on the web and tried myself. But I could not make it.
