Interesting what you learn when you dig into a routine...

```
array_indices.pro
<<snip>>
for d=ndim-1, 1, -1 do begin
  ; Remove indices from even higher dimensions.
  if (d lt ndim-1) then $
    temp mod= dimProduct[d]
  ; Indices for higher dimensions.
  result[d, *] = temp/dimProduct[d-1]
endfor
<</snip>>
```

of course some people say that all you get when you dig that deep is
dirty :)
