
Subject: Workbench - copy and past to Word

Hi,

If I copy and paste a whole line from IDL to MS Word, there is no problem, I get the same color in Word as in IDL.

Problems arise if I select less than one line (leaving the indent, a comment at the end, or just selecting a variable name). When I paste it, it becomes black (or grey, or green) text with a Blue background... which is annoying. Does anyone know how to set up the workbench so I get rid of this background???

Thanks a lot,
Jean
