Subject: What is 'iadj' and 'iend' in TRIANGULATION?
Posted by Karlo Janos on Wed, 01 Oct 2008 14:14:41 GMT

Hello all!

I'd like to use IDL's function TRIANGULATION for determining the
nearest neighbor on the surface of a sphere. Unfortunately the keyword
'CONNECTIVITY' doesn't work together with 'SPHERE'. But I found in the
struct of SPHERE the fields 'iadj' and 'iend'. What do they mean? I did
not find any explanation about this struct.
Best regards

Karlo
