Subject: Another MPFIT question
Posted by MichaelT on Sat, 11 Oct 2008 21:35:18 GMT

Today I discovered MPFIT and I am so excited how well it works (many thanks Craig!).

I ran into one problem, however, which I was not able to solve. Maybe, there is a simple solution.
Among all the parameters I have four whose sum must not be larger than a certain value:

$0 < c_1+c_2+c_3+c_4 < 1$.

All four parameters may vary between zero and one which I implemented using .limits and .limited. But, how do I implement the additional constraint? Any ideas? It may be too obvious for me to see...

Thanks, Michael
