Subject: Is it possible to do overplot in xplot?
Posted by mystea on Tue, 14 Oct 2008 05:47:08 GMT

Hi IDLers,

I found David's xplot procedure very helpful, because one can easily produce a postscript without typing bunches of commands for setting devices!

However, I don't know how to do overplot or xyouts with it, nor can I create new plot without destroying the old object. (like what we used to do in direct graphics)

Is this the limitation of object graphics? Or there is some way to add these features into the existing code?

Gene
