A bunch of TIME_TEST results have been posted but I don't recall seeing any that were run under Linux recently. Also, someone requested times for the P6/200 under Linux. I can't supply those, but here are times for my P5/166.

Hardware platform: P5/166, Triton chipset, 512K pipeline burst cache, 64M fast page mode RAM.

Video: Diamond Stealth 64 video with 4M VRAM

Software environment: Linux kernel 1.3.100, Accelerated-X (XInside) at 1280x1024x24 bpp (TrueColor visual)

Both SCSI and EIDE disks; I/O was done to an EIDE here.
