Are the curves closed? That is, do you create the complete curve by drawing a line from the final <x,y> pair to the first <x,y> pair?

Are the x values the same for the two curves? Are they evenly spaced?

Note: you don't need to post the same question multiple times, this is a newsgroup, not a chat room. Your message will stay up indefinitely. As a general rule, you might have to wait 24 hours or more before getting an answer.
