Has anyone out there used PV-WAVE Personal Edition, meant for Windows 3.1, with Windows95 ? Does it work properly ? I know that PE uses the win32s extensions in Windows 3.1, so some of it must be 32-bit already, and I presume that this makes it easier to run under Win95.

I know that the newest version, 6.0, is available specifically for Win95/NT, but since Windows95 is meant to be backwards compatible....:-)

Thanks in advance,
Craig Parish
