So here's the deal - I decided to take the plunge and try to write an app using objects. Specifically, I'm using a lot of the Catalyst library as a jumping off point. So far, I have crashed IDLDE about a dozen times this afternoon, but I have been able to actually create a TLB with some widgets on it. Still no event handling, though.

This whole object thing is a totally different paradigm than I'm used to, so I'm sure I'll have a lot of questions in the near future. But for now... I forge ahead.

Vince
