I was on a Powerbook, without a mouse. I tried all the CONTROL (ALT, APPLE, etc) key tricks I was familiar with without any success at all. I don't think my son has ever used an XTerm window, so I'm fairly certain he didn't configure anything. But, what I was trying to do was inside an IDL program, so maybe we are comparing apples and oranges. I'll look more closely next time.

Thanks for everyone's help. By the way, I solved the IDL Workbench behind the Apple bar at the top problem, by clicking the "System Controls" (?) icon at the bottom of the window. Just clicking it fixed the problem. Weird.

Cheers,

David
