Thanks for the responses to my first inquiry. I have one more question along the same line.

As an example, I have a series of gif images (4x4 for this example) with either 0 or 1 as the value and an additive composite is required for all pixels that had the value 1.

n n+1 n+2 n+3 composite output

01 01 11 00 13
00 11 10 01 ... -----> 22

speed isn't a huge concern but how would this be done?

thanks,
Scott
