Hi!

Thank you all for your replies.

@Paolo:

I am using STEREO branch of the solarsoft libraries and 'grep' (that statement about changing to windows was completely stupid of me,Hradil) or 'search' didnt find any 'execute' or 'main_execute' anywhere at my program.

I have redone the whole application with a different data set and waiting for my admin permission to run in a non-IDL machine. I want to be able to recreate this error to be sure that it is not one corrupted routine or something simple...Since i am able to run this in an IDL machine without a glitch.

Thanks again for your help,

Regards,
Vino
