Hi everyone,

During my first attempt at IDL application development using VM, I came across a problem. Hope someone can help me.

I created a .sav file using IDL 7.0 workbench to be run in VM. When i run this application in a VM, i get the error message ' Execute not available

Please consult the supplier of the application'

I have not used the command 'Execute' in this application at all. I have called only procedures and functions. What can be the probable cause of the error??

Thanks in advance,

Regards,

Vino
