On my 777 with HP-UX 10.10 SHADE_SURF, indgen(10,10) works just fine in IDL 4.0.1, do I guess it's some configuration problem on your part. And I assume that tv, bindgen(512,512) doesn't work because we're trying to put an integer into a byte array here. tv, indgen(512,512) does work, though...
