Subject: Arrow keys in IDL under HP-UX 10.10
Posted by Mario van den Ancker on Fri, 21 Jun 1996 07:00:00 GMT

Hi everyone,

After our upgrade from HP-UX 9.01 to HP-UX 10.10, the arrow
keys don't work anymore in IDL when I'm logged in remotely.
When I'm physically sitting behind the workstation on which
I'm running IDL I don't have this problem. The arrow keys
used to work fine before our upgrade, and they remain to work
perfectly in all other applications. So, although this seems
more like a problem with the standard upgrade from HP than a
problem with IDL, I was wondering if anyone had encountered
the same problem and knows how to solve it.
Thanks in advance,

 -- Mario
