Hi, Sometimes the character size are not so good, how to control them?

For example,

1) `plot,x,y,xtitle='X',title='TEST'` , how to change character size for "TEST" but not "X"?

2) If I set `!p.multi=[0,3,3]`, character size are very small? How to change them?

Generally,IDL size is relative value. I wonder if IDL can set character size to be some value, such as character size=12pt.

Best,

Xqinshan
