Hello Everyone,

I have two questions, may be very simple. Forgive me, I am not good at IDL programming.

1. How to resize pixel size. Just like with Envi--Basic Tools --Resize Data -- Change the output Pixel Size. not enlarge image. How can I do it by IDL?

2. If a pixel is cloudy, I need to search for other 4 pixels around it, and then get the mean of clear ones if there is any, then replace the all 5 pixels with the mean one.

Thanks for your help
