Thanks, David, for that very nice example. Maybe it's a strange thing to wish for, but I was hoping to put a value into the edit box without changing the drop-down list. My application is this: I want to display an image at a selected resolution - normally a multiple of the true resolution (12.5 m/pix, 25, 50, 100...) - but to allow the possibility to enter any value in between. Hence the combobox. I also want to be able to save and recover the view, so I need to put a value back into wherever `ev.str` comes from. I'd expect to find it as a `widget_control,set_something=` but I don't see it. Any ideas?

cheers,
Greg
