
Subject: data to image? Please help...

Hello,

I have an output file that gives me data in the form of:

Top, bottom, left, right sides of a cell (so basically the corners)
and two separate magnitude data columns.

What I need to be able to do is create two image files that
graphically, either via contours, colored cell scheme, or other...,
display the values of magnitude per cell (either Magnitude value 1 or
value 2).

Is this feasible to do in IDL, if not is there another program better
suited?

If anyone has any ideas, I would really appreciate it.

Thanks,

~Matt
