Subject: Re: Philosophical Question about NAN
Posted by Mark[1] on Thu, 20 Nov 2008 00:24:54 GMT

I think backward compatibility should be the overriding principle
here. So the NAN keyword defaults to unset and COMPILE_OPT IDL2
remains necessary for the new syntax. There's simply too much old code
around that shouldn't be broken unless absolutely necessary.

(Mind you, I pay very little attention to that with my own code, but
it's my code so I can do what I want!)
