Subject: Sun symbol in IDL

Posted by Mario van den Ancker on Wed, 19 Jun 1996 07:00:00 GMT

Hi everyone,

Does anybody know how I can get the astronomical symbol for
the sun (a circle with a dot in the middle) in IDL. I've tried
something like '!S!20;!3!R!207!3!', but then the dot doesn't
appear in the middle of the circle.
Thanks,

 -- Mario.
