Sorry for the half message but I hit tab and space too soon.
To conclude, I thought the problem was with command line arguments but
when I replaced a and b with simple numbers instead of the cla
arguments and executed the .sav with virtual machine nothing happend.
If I run the program in idl with compile and run, it does what is
supposed to do. What am I doing wrong here? Sorry if this is a very
stupid question, but it is the end of the week and I'm out of
options ;)

thanks in advance
