
Subject: widget_tab: prevent switching?

Hi all,

in my GUI I have an widget_tab with different tabs, each containing only a widget_base with a widget_draw. I need a possibility to temporary prevent to switch to another tab without disabling the widget_draw on the current tab. Disabling the whole widget_tab prevents switching but also disables button_events from the widget_draw of the current tab. The only workaround I found so far (switch back to the current tab when a tab event occurs) leads to some other problems and a lot of code work...

I also tried to disable the bases of each tabs or set the tab_mode to 0, nothing works...

Anyone knows a way to prevent the switching?

thanx,
Justus
