Hello,

I have been using Callable IDL from a Windows app for over a year now. Some modifications were made to the program and suddenly we're getting lots and lots of "Error From IDL" pop-up dialogs. Each dialog displays a line of text that would normally be printed to the log window if the IDL script were run from the IDL IDE (e.g. "% Compiled modlue: MY_MODULE"). I can't find a reference to these dialogs in the IDL manuals, and I would like to know if anyone else has gotten these messages.

Thank you,
Jim Brown
