
Subject: Callable IDL

Hi. I have a Motif GUI created under X11R5 on an HP 735 (HPUX 9.01) and I use

callable IDL (IDL version 4) to create some plots. My question is: How can I

get IDL to plot in one of my GUI windows instead of a separate IDL window? IDL's

Advanced Development manual says that this is possible (pg 13-2 - 13-3) but

neglects to mention how to actually do it. I attempted to ask RSI this question,

but I found out that they wouldn't answer it because my employer isn't paying

the \$500 per IDL user fee that RSI requires in order to ask questions.

Any help

that anyone can give me on this problem will be greatly appreciated.

Thanks.
