Hi,

I am using the spinners of the catalyst library. I call the control panel of the spinner and when I click in either of the lower buttons: cancel, apply or ok, I have an error telling that there is no select in the event structure returned:

```
% Tag name SELECT is undefined for structure CATCONTROL_PANEL.  
% Execution halted at: SPINNER::EVENTHANDLER 237 H:\IDLWorkspace  
\catalyst\catalyst\source\widgets\spinner__define.pro  
% CATCONTROL_PANEL::EVENTHANDLER 179 H:  
\IDLWorkspace\catalyst\catalyst\source\core  
\catcontrolpanel__define.pro  
% CATEVENTDISPATCHER 175 H:\IDLWorkspace  
\catalyst\catalyst\source\utilities\cateventdispatcher.pro  
% $MAIN$
```

I see that the event_handler to the method ControlPanel_Events on the spinner object. Could this be the problem?

Thanks,

Giorgio
