I've half composed more diatribes on the suckiness of the RSI now ITTVIS
website more times than I care to admit. Pretty much every time I visit
the website or the topic comes up on this list I start typing. It
astounds me. And with this latest go around it is worse! I'm guessing
they have built it using iTools :)

But seriously ITTVIS, come on. Isn't more difficult to sell software
when your competitors sites are far superior? It's time to scrap your
current site and call in the pros. Given the current state of the US
economy I'm sure you can find some experienced web developers cheap!
