Subject: Selection Widget

Folks,

I have written a new pop-up dialog widget that allows
the user to select various "names" from a selection given
by a string array. I've been using it to determine which
scientific data sets I should read from within all the
data sets in an HDF file, but it will work for any set
of "string names". It is probably something you have
written yourself a dozen times, but it has become fairly
useful to me, and I thought you might like to have a look.

You can find it here:

   http://www.dfanning.com/documents/programs.html#NAME_SELECTO R

Cheers,

David

P.S. If it wasn't so paltry compared to Ronn's presents,
I would encourage you to think of it as a Christmas
present. Maybe it is better to think of it as a tiny
treat that fell off the Christmas tree and was saved
before the dog ate it. :-)

Happy Holidays!
