I'm having problems with installing IDI 6.3 on ubuntu

7.10. I downloaded 6.3 from the RSI website, followed all installation instructions.

When I try to run idlde, the startup IDL screen disappears after a second, and then nothing afterwards. No errors etc.

However when I type 'idl' at the command prompt, it seems to work fine. I would like to get idlde working since I'm not familiar with working in the command prompt.

Anyone experienced this before? ANy ideas?

Thanks!

Niv
