Subject: scatter plots make large PostScript files Posted by MarioIncandenza on Thu, 01 Jan 2009 19:35:39 GMT View Forum Message <> Reply to Message

Too large, in fact. In this case, I want the scatter as an underlay to a line plot showing the averaged data. But the resulting EPS file is just too huge. Any tips/tricks/brilliant ideas on how to get the plot I want with a manageable EPS file size?
