Hi, all.

I want to update my IDL from 7.0.0 to 7.0.3.

But when I used "Software Updates" in Help menu, it didn't find the the available updates about 7.0.3.

Is there offline updater for 7.0.3 which can be downloaded?

I have another computer which has be updated to 7.0.3 before.

Is there any method to copy out the update files about 7.0.3 from it?

Therefore, I can use them to update IDL on this computer.

Du
