Has anyone implemented something equivalent to the map_set routine available in IDL in PV-WAVE

the map_projections stuff in PV-WAVE too low level for many users while I always though that map_set worked great. (with a few limitations). Since the IDL map_set program is written in IDL has anyone ported it to PV-WAVE. Since the stuff is in the users library are there any legal problems with doing something like that. Please Email. I'll post summary.
