Hi,

I'm looking for a slider widget to set time data, at least in the format hh:mm:ss.xxxx, with a resolution of 10 micro seconds. The result must be double precision floating due to the precision required.

Hm, well I could make it up of 2 integer sliders for hh and mm and 1 floating slider for the second. As the cw_fslider function is written in IDL it could be adopted to what I need but I don't want to re-invent sliders....

Norbert
