I am relatively new to IDL, and would like to know if it is possible
to 'mix' a drawing made using IDLgrView and with a widget_draw window?
If it is, can someone point me to either sample code which will  do
this or a section in a manual? I am using IDL 6.0.

I am trying to create a small plot in a corner of a larger plot. The
smaller plot is an orientation plot which will show how the data in
the larger 2-D plot was taken from a 3-D data array.

Any assistance would be greatly appreciated.
