Hi Anne

you can use the FreeNX server with unlimited users. <http://freenx.berlios.de>

NX is an exciting new technology for remote display. It provides near local speed application responsiveness over high latency, low bandwidth links. The core libraries for NX are provided by NoMachine under the GPL. FreeNX is a GPL implementation of the NX Server and NX Client Components.

It is compatible with the client from nomachine. I never used other clients.

cheers

Reimar
