## Subject: Processing Mail with IDL
Posted by hahn on Mon, 01 Jul 1996 07:00:00 GMT

Hi,

I would like to write a IDL program which receive a mail and depending on the mail body changes entries in a data base. After processing the mail sender should get a reply. The data base already exists and the processing routines have been written in IDL. Sending a mail can be done easily by writing the mail body into a file and spawing the unix mail command.

But how do I read a mail from within IDL ?

Norbert
