Thank you all for your responses - I am still trying to get the histogram method working, but have come up with a temporary working solution using UNIQ and running it over two FOR loops.

James - my problem wasn't as complicated as yours, as all my points are the same precision, so that identical points are truly exactly the same. Thanks for sharing your method though. May be useful later! (I can't easily move to R as I am using IDL coupled with ENVI for satellite data work . . .)

Helen
