
Subject: Somewhat off subject: Fortran for Windows 95?

Please excuse the non-relevant post. After lurking in the comp.os.ms-windows.programmer newsgroups for a bit, I feel that I'll get a more insightful answer from people who participate in the IDL/PVWAVE newsgroup...

What do you users of Windows 95 and FORTRAN recommend for a FORTRAN compiler? What's the best bargain? What's the best price not considered? Are there any f90 implementations? Anyone using GNU f77 under Linux?

Thanks in advance.
