Hi all,

Given a 2-D array such as

0	1	1	2	1
0	2	1	1	1
1	0	2	2	1

where the entries are labels, the columns represent items and the rows are voters, I want a IDL function that returns the majority vote labels.

So here I should get

0 ? 1 2 1

as output, where ? = "don't care". There must not be a loop over columns. I've got a clumsy solution, but I'm sure there's an elegant one somewhere?

Cheers,

Mort
