
Subject: Why plots shown on screen and postscript are different?

Hi,

Generally, I do my work using 'set_plot,'win" first, showing the plots on screen. Then after everything is good, I simply change it to 'set_plot,'ps", sometimes the plots in postscript is good as what I saw on screen, but sometimes so bad for I have to change settings again and again. May I ask how to do this? In fact, I need plots in postscript only for publication or presentation. Are there any method to save the plots on screen for that? I mean, sometimes I need high quality plots, but saveJpeg donot save good enough plots.

Best,

Xqinshan
