Subject: Supervised Classification: How to set a pixel's color according to the ROI's color?

There are a 6-band image img[6, 512, 512] and some ROI arrays that got
via function ENVI_GET_ROI_DATA. I want to get a post-classification
image, however, I don't know how to reset a pixel's color to be the
color of the ROI where the pixel belongs. Can any function do this?
Thank you very much!
